License type: Dual, Commercial Payments Accepted: PayPal / Skrill A: VTD has been my disassembler of choice for a long time. It is extensible and well integrated. A popular tool for this is Massif, part of the Visual Studio Profiler. It has a Windows GUI but you can do it from command line, like: `msinstr /mdebug /fo:result.txt vtd.exe d:\my.exe` The `massif.exe` tool comes with the VSProfiler, of course. Based in Southport, Port Jackson Canoe Club, abbreviated to PJC, is a community canoeing club with a close relationship with the Royal South Sydney Yacht Squadron. We have a working relationship with the club, although we do

not need to be members in order to use their facilities. PJC is based in Southport in the north-west corner of Sydney. Our club colours are red and white. The club has close links with both the Royal South Sydney Yacht Club and Royal South Sydney Amateur Sailing Club. Some time ago we attended the state championship regatta at Ruseas Cove, right next to the Royal South Sydney Sailing Club

Q: How to open a file then add to a list, then save the list

I'm writing a program that opens a file and converts its data into xcel format. When I open the file it adds the data from each row to the list. If the data from that

row is 25.0 then it puts 25.0 in the first spot of the list, otherwise it adds the error message to the list. f =
open('enter_data.xlsx', 'r') sheet =
f.read() f.close() list1 = [] list2 = [] i = 1
while i
